

Part 1 – StyleGAN

StyleGANv3 to generate realistic face images. To do this, used the pretrained network. After too many attempts, I achieve most stable photos that created by stylegan3-t ffhq-1024x1024.pkl

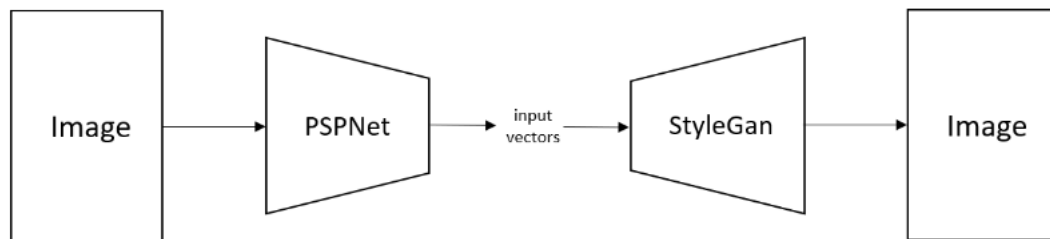

Part 2 - StyleGAN Animation

Creating an animation of creating the second face by changing the first face. To do this, started by creating the first face and then slowly changing the face vector step-by-step by a small amount, obtain the second face.

Part 3 – Pixel2Style2Pixel

Pixel2Style2Pixel Framework creates vectors representing the given face. The procedure could be seen

Creating the animation using images from actors or famous people.

Especially for this part, Simplified PSPNet was used.
